

Ezlo PlugHub Energy

The only smart plug with a built-in control hub.

As the industry's first home automation device to combine the features of a smart home hub, smart plug, and energy monitor in a single product, the Ezlo PlugHub Energy offers huge functionality for under \$40.

It enables control of up to 30 Z-Wave devices such as lights, smart locks, thermostats, sensors, and more—and offers control of Wi-Fi devices through integration with Google Assistant or Amazon's Alexa.

Any appliance that uses up to 15 amps or less than 10 kw can be plugged into the PlugHub Energy, and it provides in-app reporting on power consumption over days, weeks, and months.

Upsell any customer looking for a standard smart plug and give them control capability for the same price. This lets you sell in additional devices and increase your average order per customer.

The PlugHub Energy is a true plug and play solution in a familiar form factor, making it an ideal way to broaden your customer base and increase sales.

Key Features

Makes standard devices smarter

Single-app control of up to 30 Z-Wave devices

Use Google Assistant or Amazon's Alexa to control any device (coming soon)

Monitors energy usage of any device plugged into it; app also displays energy consumption of other Z-Wave metered class devices

Offers remote access through the Vera app for iOS & Android

Enables scene creation for comfort and convenience
